

SOF IGKO — Unit 7 Deep-Dive

Transport & Communication

Class III • Parent-readable notes

What this unit is about

The ways people and goods travel from place to place, and the ways we send messages to one another — old and new.

1. Types of transport

Type	Travels on/through	Examples
Land	Roads and rails	Car, bus, bicycle, train, truck
Water	Rivers, seas	Boat, ship, ferry, submarine
Air	Sky	Aeroplane, helicopter

- **Fastest** transport → **aeroplane**.
- **Cheapest** for short distances → **walking or cycling**.
- A **train runs on rails/tracks** and can carry many people and heavy goods.
- A **submarine** travels **under water**.

2. Communication — sending messages

- **Face-to-face** — talking to someone near you (the most direct).
- **Telephone / mobile** — talking to people far away.
- **Postal** — letters and postcards delivered by the **postman**; we stick a **stamp** on the envelope and post it at the **post office**.
- **Internet / email** — messages sent across the world in **seconds**.
- **Mass media** — newspaper (read), television (watch), radio (listen).

3. Old vs new

- **Old:** letters by post, telegram, messengers, bullock carts.
 - **New:** email, video call, social media, mobile apps — much **faster**.
-
-

Common exam traps

- **Aeroplane = air, ship/boat = water, train/car = land.** Match the vehicle to the correct type.
 - **Email is faster** than a posted letter.
 - A **postman delivers letters** (transport of messages) — he does not fly planes.
 - **Radio** is for listening; **television** is for watching.
-
-

Quick recall

1. Fastest transport → **aeroplane**
2. Runs on rails → **train**; travels under water → **submarine**
3. We stick a ___ on a letter → **stamp**
4. Talk to faraway people → **telephone**
5. Message across the world in seconds → **email / internet**
6. Three types of transport → **land, water, air**
